

Adidas Sales Analysis

Project Overview

The Adidas Sales Analysis Dashboard is a Power BI project developed to analyze and visualize sales performance data across multiple business dimensions such as products, regions, retailers, and sales methods. The dashboard transforms raw sales data into interactive reports and meaningful insights that help management monitor business performance and make strategic decisions.

The project focuses on identifying sales trends, profitability, product demand, and operational efficiency using data visualization and DAX measures in Power BI.

Project Objective

- To analyze Adidas sales and profit performance using interactive dashboards.
- To identify top-performing products, retailers, and regions.
- To monitor key business KPIs such as total sales, profit, units sold, and operating margin.
- To provide actionable business insights for improving profitability and sales growth.
- To support data-driven decision-making through visual analytics.

Scope of Work

- Import and clean Adidas sales dataset in Power BI.
- Perform data transformation using Power Query Editor.
- Create calculated measures and KPIs using DAX.
- Design an interactive single-page dashboard with charts, slicers, and KPI cards.
- Analyze sales trends, product performance, and sales methods.
- Generate business insights and recommendations based on dashboard analysis.
- Develop a professional and user-friendly dashboard layout for stakeholders.

Data Source

The project uses the Adidas Sales dataset imported from CSV format into Power BI Desktop.

Data Architecture Flow

Raw Excel Dataset

Power Query Data Cleaning

Data Modeling & DAX Measures

Power BI Visualizations

Interactive Dashboard & Insights

The dataset acts as a centralized sales table used for analysis and dashboard reporting.

Implementation Steps

Data Import

Imported the Adidas sales dataset into Power BI Desktop from Excel source.

DAX Measure Creation

Created calculated measures for:

- Total Sale — Total Sales 1 = `SUM('Data Sales Adidas'[Total Sales])`
- Total Profit — Total Profit = `SUM('Data Sales Adidas'[Operating Profit])`
- Units Sold
- Margin % — Margin % = `[Total Profit]/[Total Sales 1]`
- Average Price per Unit - Avg Price Per Unit = `AVERAGE('Data Sales Adidas'[Price per Unit])`

Dashboard Development

Designed dashboard visuals including:

Two pages -Sales Overview ,Product and Geography

- KPI Cards
- Line Chart – Analyze sales trends over time.
- Funnel Chart – Analyze units sold by product category.
- Donut Chart — Analyze profit contribution by sales method.
- Table Visual – Display detailed product-wise sales analysis.
- Slicers→ Operating Margin
- Line chart - Total Profit by Product
- Units Sold by Region (Tree Map)
- Column - Sales by Sales Method
- Bar chart - Sales by State

These filters allow users to dynamically analyze data based on business requirements.

Tools & Technologies Used

- Power BI Desktop
- Power Query
- DAX (Data Analysis Expressions)
- Microsoft Excel

Business Insights

- Men's Street Footwear generated high sales volume.
- Certain regions contributed higher profits compared to others.
- Online sales methods showed strong profit contribution.
- Products with higher operating margins improved profitability.
- Sales trends indicate fluctuating monthly performance.

Business Recommendations

- Increase inventory for high-demand products.
- Focus marketing campaigns on profitable regions.
- Strengthen online sales channels.
- Improve pricing strategy for low-margin products.
- Monitor low-performing products and retailers.

Expected Outcome

The dashboard helps management:

- Monitor overall business performance
- Improve profitability
- Optimize inventory planning
- Make faster and smarter business decisions
- Identify growth opportunities

Conclusion

The Adidas Sales Analysis Dashboard provides a complete overview of sales, profitability, product performance, and retailer analysis through interactive visualizations and KPI tracking. The dashboard supports data-driven decision-making and helps improve overall business performance.
